

Secure Compartmented Information Facilities for Mission-Critical Systems

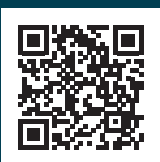

Bespoke, deployable and secure RF shielded containers designed and constructed to meet the demanding requirements of HEMP / IEMI, TEMPEST / SCIF and RFI environments.

APC Technology Group has a wealth of experience in providing turnkey SCIF solutions, providing a complete M&E fit including power, HVAC and internal finishes. Our SCIF containers can be engineered to meet the requirements of MIL-STD-188-125, DEF-STAN-59-188, and SDIP-29, depending on the end-use application.

Containers are ISO-compliant for ease of transportation and provide RFI shielding to the levels required by the application. Typically forming the primary RF shield, our containers are welded by fully licensed and experienced welders. Our bespoke SCIFs also include a 3-part paint system, as preferred by many offshore and marine industry organisations.

See what's involved in our SCIF design service

Each container project we work on is bespoke and typically includes its own internal finishes, acoustic and thermal insulation, full electrical package, lighting, air conditioning, dehumidification, fresh air feed, UPS and solar power systems.

Bespoke SCIF key features

EMP shielding: Designed to protect equipment and data against electromagnetic pulse (EMP) from interference caused by nuclear explosions.

RF shielding: Enhanced radio frequency (RF) shielding to prevent wireless signal leakage.

Soundproofing and acoustic enhancements: To prevent eavesdropping and maintain acoustic security, you can opt for specialised soundproofing materials and acoustic treatments for all walls, ceilings and floors.

Environmental control systems: Precise HVAC systems to regulate temperature, humidity and air quality.

Secure communications and office equipment: Our experts provide secure communication solutions, including encrypted phones and video conferencing, to keep sensitive information protected.

Redundancy and fail-safe mechanisms: Ensure continuous operation with systems like UPS, backup power generators and more, so your SCIF is fully operational, even during power outages or system failures.

SCIF-as-a-Service. **Secure. Agile. Hassle-Free.**

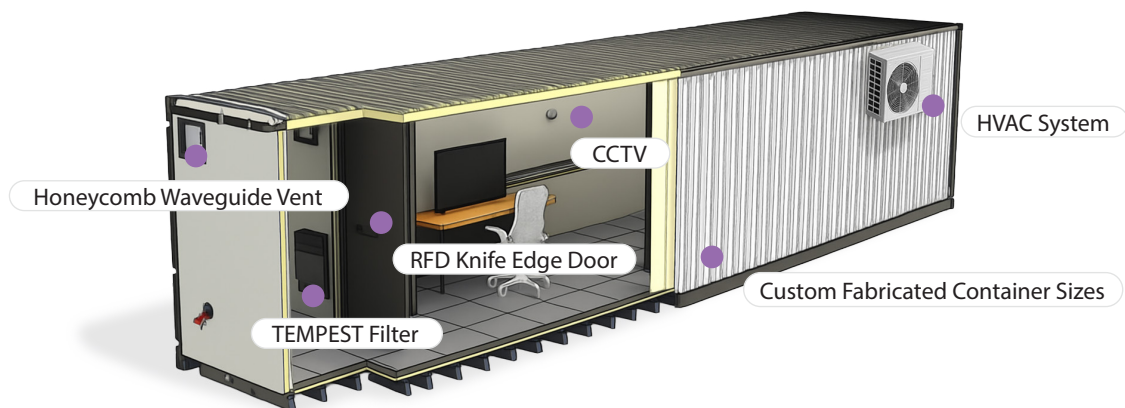

In addition to a full design and build service, APC also provide flexible leasing options, allowing organisations to quickly access, deploy or relocate shielded facilities depending on their requirements. APC's pre-fabricated shielded solutions can also be deployed up to 40% faster.

- ✓ Minimal capital required
- ✓ Fixed and transparent monthly costs
- ✓ Includes all compliance and maintenance, protecting against obsolescence and changing standards
- ✓ Easy to upgrade, relocate or re-scale
- ✓ Ability to extend, upgrade or return at the end of your leasing terms or project

Looking to lease a SCIF?

SCIF leasing isn't just cost-effective, it makes secure facilities more accessible while offering flexibility to scale and stay compliant. **Find out more online.**

Our priority is to understand your project so we can deliver a solution that exceeds your expectations. We achieve this through a collaborative approach, tailoring solutions to meet each client's unique SCIF specifications, ensuring timely delivery and adhering to established budgets.
